1. Public Controllers

1.1 CommentController

```php
<?php

namespace App\Http\Controllers;

use App\Comment;
use Illuminate\Http\Request;
use Illuminate\Support\Facades\Auth;

class CommentController extends Controller
{
    public function index()
    {
        $comments= Comment::where('user_id', Auth::id())-
>paginate(10);

        return view('comments.index')->with('comments', $comments);
    }
    public function store(Request $request)
    {
        $this->validate($request, ['body' => 'required','tmdb_id'
=> 'required', 'item_title' => 'required', 'media_type' =>
'required' ]);

        //dd($request->all());

        $comment = new Comment();
        $comment->body = $request->body;
        $comment->user_id = auth()->user()->id;
        $comment->item_id = $request->tmdb_id;
        $comment->item_title = $request->item_title;
        $comment->media_type = $request->media_type;

        $comment->save();

        return redirect()->back();
    }

    public function destroy(Comment $comment)
    {

        $comment->delete();

        return redirect()->back();
    }

}
```

1.2 EpisodeController

```php
<?php

namespace App\Http\Controllers;

use App\Episode;
use App\Item;
use App\TMDB;
use Illuminate\Http\Request;
use Illuminate\Support\Facades\Auth;
use Illuminate\Support\Facades\DB;

class EpisodeController extends Controller
{
    public function store(Request $request, TMDB $tmdb)
    {

        $request->validate([
            'tmdb_id' => 'required',
            'episode_tmdb_id' => 'required',
        ]);

        //dd($request->all());

        $request->request->add(['user_id' => Auth::id()]);

        $find=Episode::EpisodeExist($request->user_id, $request->episode_tmdb_id);

        if ($find)
        {
            $this->destroy($find);

            return redirect()->back();

        }else{

            $episode=new Episode();

            $episode->tmdb_id = $request->tmdb_id;
            $episode->episode_tmdb_id = $request->episode_tmdb_id;
            $episode->user_id = $request->user_id;
            $episode->seen = true;

            $episode->save();

            if (! Item::ItemExist($request->user()->id, $request->tmdb_id))
            {
                $item=new Item($tmdb);

                $item->title = $request->item['title'];
                $item->tmdb_id = $request->item['tmdb_id'];
```

```
                    $item->user_id = $request->user_id;
                    $item->poster = $request->item['poster'];
                    $item->media_type = $request->item['media_type'];
                    $item->watched = true;

                    $item->save();

            }

            return redirect()->back();

        }

    }

    public function destroy($data)
    {
        DB::table('episodes')->where('episode_tmdb_id', $data-
>episode_tmdb_id)->where('user_id', Auth::id())->delete();

    }
}
```

1.3 HomeController

```php
<?php

namespace App\Http\Controllers;
use App\TMDB;
use Illuminate\Http\Request;

class HomeController extends Controller
{
    private $tmdb;

    /**
     * Create a new controller instance.
     *
     * @return void
     */
    public function __construct(TMDB $tmdb)
    {
        //$this->middleware('auth');
        $this->tmdb = $tmdb;

    }

    /**
     * Show the application dashboard.
     *
     * @return \Illuminate\Contracts\Support\Renderable
     */
    public function index()
    {
        $popular=$this->tmdb->trending();
        //dd($popular);
```

```
        return view('home')->with('movies', $popular);
    }
    public function dashboard()
    {
        $popular=$this->tmdb->trending();
        //dd($popular);
        return view('welcome')->with('movies', $popular);
    }
}
```

1.4 ItemController

En el método ítem, llamo a las funciones del modelo *Item*, para crear el objeto según sea una película o una serie.

```php
<?php

namespace App\Http\Controllers;

use App\Episode;
use App\Item;
use App\Item\Model;
use GuzzleHttp\Client;
use App\TMDB;
use App\User;
use Illuminate\Http\Request;
use Illuminate\Support\Facades\App;
use Illuminate\Support\Facades\Auth;
use Illuminate\Support\Facades\DB;

class ItemController extends Controller
{

    public function item($tmdbId, $mediaType, Item $item)
    {
        if ($mediaType == 'tv')
        {
            $episodes=$item->ItemEpisode($tmdbId, $mediaType);
            $item=$item->item($tmdbId,$mediaType);
            $comments=DB::table('comments')->where('item_id',
$tmdbId)->get();

            $watched=Item::ItemWatched(Auth::id(), $tmdbId, true);
            $watchlist=Item::ItemWatchlist(Auth::id(), $tmdbId, true);

            return view('items.show')->with('item', $item)-
>with('watched', $watched)->with('watchlist', $watchlist)-
>with('episodes', $episodes)->with('comments', $comments);

        }else{

            $item=$item->item($tmdbId,$mediaType);

            $watched=Item::ItemWatched(Auth::id(), $tmdbId, true);
            $watchlist=Item::ItemWatchlist(Auth::id(), $tmdbId, true);
            $comments=DB::table('comments')->where('item_id',
$tmdbId)->get();
```

```
            return view('items.show')->with('item', $item)-
>with('watched', $watched)->with('watchlist', $watchlist)-
>with('comments', $comments);

        }

    }

    public function search()
    {

        return view('items.search');
    }

    public function searchItem(Request $request, Item $item)
    {
        //dd($request->all());
        $items=$item->search($request->search);
        //dd($item);

        return view('items.search')->with('items',$items);
    }

    public function store(Request $request, TMDB $tmdb)
    {
        $nameRoute = $request->route()->getName();

            $request->validate([
            'title' => 'required',
            'tmdb_id' => 'required',
            'poster' => 'required',
            'media_type' => 'required',
        ]);

        $request->request->add(['user_id' => Auth::id()]);

        $item=new Item($tmdb);

        $find=Item::ItemExist($request->user_id, $request->tmdb_id);

        if ($find){

            if ($nameRoute == 'items.store') {

                    $this->handleWatch($request, $find, $item);

                 return redirect()->back();

            }

            if ($nameRoute == 'item.watchlist') {

                    $this->handleWatchlist($request, $find, $item);

                 return redirect()->back();

            }
```

```php
        }else{

            $item->title = $request->title;
            $item->tmdb_id = $request->tmdb_id;
            $item->user_id = $request->user_id;
            $item->poster = $request->poster;
            $item->media_type = $request->media_type;

            if ($nameRoute == 'item.watchlist')
            {
                $item->watchlist = true;
            }
            if ($nameRoute == 'items.store')
            {
                $item->watched = true;

            }

            $item->save();

            return redirect()->back();

        }

    }

    public function handleWatch($data1, $data2, $data3)
    {
        if ($data2->watched) {

            $this->destroy($data2);

        } else {

            $data3->watched = true;

            DB::table('items')->where('tmdb_id', $data1->tmdb_id)-
>where('user_id', $data1->user_id)->update(['watched' => $data3-
>watched]);

        }
    }

    public function handleWatchlist($data1, $data2, $data3)
    {
        if ($data2->watchlist) {

            DB::table('items')->where('tmdb_id', $data1->tmdb_id)-
>where('user_id', $data1->user_id)->update(['watchlist' => false]);

        } else {

            $data3->watchlist = true;

            DB::table('items')->where('tmdb_id', $data1->tmdb_id)-
>where('user_id', $data1->user_id)->update(['watchlist' => $data3-
>watchlist]);

        }
    }
```

```
    public function destroy($data)
     {
         DB::table('items')->where('tmdb_id', $data->tmdb_id)-
>where('user_id', $data->user_id)->delete();
         DB::table('episodes')->where('tmdb_id', $data->tmdb_id)-
>where('user_id', $data->user_id)->delete();

     }
}
```

1.5 PostController

```php
<?php

namespace App\Http\Controllers;

use App\Post;
use Illuminate\Http\Request;

class PostController extends Controller
{
    public function index()
    {
        $posts = Post::paginate(5);
        //dd($posts);

        return view('posts.index')->withPosts($posts);
    }

    public function show($slug)
    {
        $post = Post::where('slug',$slug)->first();
        if(!$post)
        {
            return redirect('/')->withErrors('requested page not
    found');
        }

        return view('posts.show')->withPost($post);
    }
}
```

1.6 UserController

En el método registration_view, creo la vista para registrarse comprobando el *token* único de registro

```php
<?php

namespace App\Http\Controllers;

use App\Comment;
use App\Invite;
use App\Item;
use App\TMDB;
use Illuminate\Http\Request;
use App\User;
use Illuminate\Support\Facades\Auth;
use Illuminate\Support\Facades\DB;

class UserController extends Controller
{
    public function __construct()
    {
        $this->middleware('auth')->except('registration_view');
    }
    public function show()
    {
        $user=User::find(Auth::id());
        $totalusers=User::count();
        $phrase=Item::PhraseRand();
        $comments=Comment::where('user_id', Auth::id())-
>orderByDesc('created_at')->take(10)->get();
        $userItemsWatched = Item::ItemsPerUser(Auth::id());
        $topusers= User::topUsers();
        $topusersMovie= User::topUsersMovies();
        $topusersTv= User::topUsersTv();

        $user->comments = $comments;
        $user->totalusers = $totalusers;
        $user->phrase = $phrase;
        $user->userItemsWatched = $userItemsWatched;
        $user->topusers = $topusers;
        $user->topusersMovie = $topusersMovie;
        $user->topusersTv = $topusersTv;

        //dd($user);

        $items=DB::table('items')->where('user_id', $user->id)->get();

        return view('profiles.show')->with('user', $user)-
>with('items',$items);
    }

    public function registration_view($token)
    {
        $invite = Invite::where('token', $token)->first();
        return view('auth.register',['invite' => $invite]);
```

```php
    }

    public function update_avatar(Request $request){

        $request->validate([
            'avatar' =>
'required|image|mimes:jpeg,png,jpg,gif,svg|max:2048',
        ]);

        $user = Auth::user();

        $avatarName = $user->id.'_avatar'.time().'.'.request()-
>avatar->getClientOriginalExtension();

        $request->avatar->storeAs('avatars',$avatarName);

        $user->avatar = $avatarName;
        $user->save();

        return back()
            ->with('success','You have successfully upload image.');

    }
}
```

2. Auth Controllers

2.1 ForgotPasswordController

```php
<?php

namespace App\Http\Controllers\Auth;

use App\Http\Controllers\Controller;
use Illuminate\Foundation\Auth\SendsPasswordResetEmails;

class ForgotPasswordController extends Controller
{
    /*
    |-------------------------------------------------------------
------------
    | Password Reset Controller
    |-------------------------------------------------------------
------------
    |
    | This controller is responsible for handling password reset
emails and
    | includes a trait which assists in sending these notifications
from
    | your application to your users. Feel free to explore this
trait.
    |
    */

    use SendsPasswordResetEmails;

    /**
     * Create a new controller instance.
```

```
     *
     * @return void
     */
    public function __construct()
    {
        $this->middleware('guest');
    }
}
```

2.2 LoginController

```php
<?php

namespace App\Http\Controllers\Auth;

use App\Http\Controllers\Controller;
use Illuminate\Foundation\Auth\AuthenticatesUsers;

class LoginController extends Controller
{
    /*
    |--------------------------------------------------------------
---------
    | Login Controller
    |--------------------------------------------------------------
---------
    |
    | This controller handles authenticating users for the application
and
    | redirecting them to your home screen. The controller uses a
trait
    | to conveniently provide its functionality to your applications.
    |
    */

    use AuthenticatesUsers;

    /**
     * Where to redirect users after login.
     *
     * @var string
     */
    protected $redirectTo = '/';

    /**
     * Create a new controller instance.
     *
     * @return void
     */
    public function __construct()
    {
        $this->middleware('guest')->except('logout');
    }
}
```

2.3 RegisterController

En el método créate, se crea el usuario, comprueba si el email es el correcto para el token de registro y lo borra para que no se pueda volver a usar. Luego notifico al bot de telegram que un nuevo usuario ha sido creado y que me notifique en mi canal privado.

```php
<?php

namespace App\Http\Controllers\Auth;

use App\Invite;
use App\Notifications\ShowtraktStats;
use App\User;
use App\Http\Controllers\Controller;
use Illuminate\Support\Facades\Hash;
use Illuminate\Support\Facades\Notification;
use Illuminate\Support\Facades\Validator;
use Illuminate\Foundation\Auth\RegistersUsers;

class RegisterController extends Controller
{
    /*
    |--------------------------------------------------------------------------
    | Register Controller
    |--------------------------------------------------------------------------
    |
    | This controller handles the registration of new users as well as their
    | validation and creation. By default this controller uses a trait to
    | provide this functionality without requiring any additional code.
    |
    */

    use RegistersUsers;

    /**
     * Where to redirect users after registration.
     *
     * @var string
     */
    protected $redirectTo = '/';

    /**
     * Create a new controller instance.
     *
     * @return void
     */
    public function __construct()
    {
        $this->middleware('guest');
    }

    /**
     * Get a validator for an incoming registration request.
     *
```

```php
     * @param  array  $data
     * @return \Illuminate\Contracts\Validation\Validator
     */
    protected function validator(array $data)
    {
        return Validator::make($data, [
            'name' => ['required', 'string', 'max:255'],
            'email' => ['required', 'string', 'email', 'max:255',
'unique:users'],
            'password' => ['required', 'string', 'min:8',
'confirmed'],
            'custom_title' => ['required', 'string', 'max:255'],

        ]);
    }

    /**
     * Create a new user instance after a valid registration.
     *
     * @param  array  $data
     * @return \App\User
     */
    protected function create(array $data)
    {
        $user= User::create([
            'name' => $data['name'],
            'email' => $data['email'],
            'password' => Hash::make($data['password']),
            'custom_title' => $data['custom_title'],

        ]);

        $invite = Invite::where('email', $data['email'])->first();
        $invite->delete();

        $user->notify(new ShowtraktStats($user));

        return $user;
    }
}
```

2.4 ResetPasswordController

```php
<?php

namespace App\Http\Controllers\Auth;

use App\Http\Controllers\Controller;
use Illuminate\Foundation\Auth\ResetsPasswords;

class ResetPasswordController extends Controller
{
    /*
    |----------------------------------------------------------------
---------
    | Password Reset Controller
    |----------------------------------------------------------------
---------
    |
```

```
    | This controller is responsible for handling password reset
requests
    | and uses a simple trait to include this behavior. You're free to
    | explore this trait and override any methods you wish to tweak.
    |
    */

    use ResetsPasswords;

    /**
     * Where to redirect users after resetting their password.
     *
     * @var string
     */
    protected $redirectTo = '/home';

    /**
     * Create a new controller instance.
     *
     * @return void
     */
    public function __construct()
    {
        $this->middleware('guest');
    }
}
```

2.5 VerificationController

```
<?php

namespace App\Http\Controllers\Auth;

use App\Http\Controllers\Controller;
use Illuminate\Foundation\Auth\VerifiesEmails;

class VerificationController extends Controller
{
    /*
    |-----------------------------------------------------------------
---------
    | Email Verification Controller
    |-----------------------------------------------------------------
---------
    |
    | This controller is responsible for handling email verification
for any
    | user that recently registered with the application. Emails may
also
    | be re-sent if the user didn't receive the original email
message.
    |
    */

    use VerifiesEmails;

    /**
     * Where to redirect users after verification.
```

```
     *
     * @var string
     */
    protected $redirectTo = '/home';

    /**
     * Create a new controller instance.
     *
     * @return void
     */
    public function __construct()
    {
        $this->middleware('auth');
        $this->middleware('signed')->only('verify');
        $this->middleware('throttle:6,1')->only('verify', 'resend');
    }
}
```

3. Admin Controllers

3.1 AdminController

```php
<?php

namespace App\Http\Controllers\Admin;

use App\Comment;
use App\Item;
use App\User;
use Illuminate\Http\Request;
use App\Http\Controllers\Controller;
use Illuminate\Support\Facades\DB;

class AdminController extends Controller
{
    public function index()
    {

        $totalusers=User::count();
        $totalitems = Item::TotalItems();
        $comments=Comment::all()->sortByDesc('created_at')->take(10);
        $totalcomments=Comment::count();
        $topmovies= DB::select("SELECT tmdb_id, poster FROM items
WHERE media_type='movie' GROUP BY tmdb_id, poster ORDER BY count(*)
DESC LIMIT 9");
        $toptvshows= DB::select("SELECT tmdb_id, poster FROM items
WHERE media_type='tv' GROUP BY tmdb_id, poster ORDER BY count(*) DESC
LIMIT 9");
        $topusers= DB::select("SELECT user_id FROM items GROUP BY
user_id ORDER BY count(*) DESC LIMIT 9");

        return view('admin.dashboard')->with('item', $totalitems)
                ->with('user', $totalusers)
                ->with('comments', $comments)
                ->with('totalcomments', $totalcomments)
                ->with('topmovies', $topmovies)
                ->with('toptvshows', $toptvshows)
                ->with('topusers', $topusers);
```

```
    }
}
```

3.2 CommentController

```php
<?php

namespace App\Http\Controllers\Admin;

use App\Comment;
use App\Item;
use Illuminate\Http\Request;
use App\Http\Controllers\Controller;

class CommentController extends Controller
{
    public function index()
    {
        $comments = Comment::all();

        return view('admin.comments.index')->withComments($comments);
    }

    public function show(Comment $comment)
    {
        $phrase=Item::PhraseRand();

        return view('admin.comments.show',
compact('comment','phrase'));
    }

    public function edit(Comment $comment)
    {

        return view('admin.comments.edit', compact('comment'));
    }

    public function update(Request $request, Comment $comment)
    {
        $this->validate($request, ['body' => 'required']);

        $comment->body = $request->input('body');
        $comment->save();

        return redirect('/admin/comment');
    }
    public function destroy(Comment $comment)
    {

        $comment->delete();

        return redirect()->back();
    }
}
```

3.3 PostController

```php
<?php

namespace App\Http\Controllers\Admin;

use App\Http\Requests\PostFormRequest;
use App\Post;
use Illuminate\Http\Request;
use App\Http\Controllers\Controller;
use Illuminate\Support\Str;

class PostController extends Controller
{
    public function index()
    {
        $posts = Post::all();

        return view('admin.posts.index')->withPosts($posts);
    }

    public function create(Request $request)
    {
        return view('admin.posts.create');

    }

    public function store(PostFormRequest $request)
    {
        $post = new Post();
        $post->title = $request->get('title');
        $post->body = $request->get('body');
        $post->image_url = $request->get('image_url');

        $post->slug = Str::slug($post->title);

        $duplicate = Post::where('slug', $post->slug)->first();

        if ($duplicate) {
            return redirect()->back()->withErrors('Title already
exists.')->withInput();
        }

        $post->author_id = $request->user()->id;

        $post->save();

        return redirect('/admin/post');
    }

    public function edit(Request $request, $slug)
    {
        $post = Post::where('slug', $slug)->first();

        return view('admin.posts.edit')->with('post', $post);
    }

    public function update(Request $request)
    {

        $post_id = $request->input('post_id');
        $post = Post::find($post_id);
```

```php
        $title = $request->input('title');
        $slug = Str::slug($title);

        $post->slug = $slug;
        $post->title = $title;
        $post->body = $request->input('body');

        $post->save();

        return redirect('/admin/post');

    }

    public function destroy(Post $post)
    {

        $post->delete();

        return redirect()->back();
    }
}
```

3.3 UsersController

En el método process_invites valida que el email es válido, luego busca que no exista en la base de datos, crea un token único de registro y se lo añade a una url autogenerada con caducidad, así solo se podrá utilizar una vez y solo será válido durante 300 minutos. Luego procesa y envía la invitación por email.

```php
<?php

namespace App\Http\Controllers\Admin;

use App\Comment;
use App\Invite;
use App\Notifications\InviteNotification;
use App\User;
use App\Item;
use Illuminate\Http\Request;
use App\Http\Controllers\Controller;
use Illuminate\Support\Facades\DB;
use Illuminate\Support\Facades\Notification;
use Illuminate\Support\Facades\URL;
use Illuminate\Support\Facades\Validator;
use Illuminate\Support\Str;

class UsersController extends Controller
{

    public function index()
    {
```

```php
        $users = User::all();

        return view('admin.users.index', compact('users'));

    }

    public function invite()
    {
        return view('admin.users.invite');
    }

    public function process_invites(Request $request)
    {
        $validator = Validator::make($request->all(), [
            'email' => 'required|email|unique:users,email'
        ]);
        /* after first validation, look up for email and add a custom error*/
        $validator->after(function ($validator) use ($request) {
            if (Invite::where('email', $request->input('email'))->exists()) {
                $validator->errors()->add('email', 'There exists an invite with this email!');
            }
        });
        /* return errors if validator fails*/
        if ($validator->fails()) {
            return redirect(route('admin.users.invite'))
                ->withErrors($validator)
                ->withInput();
        }
        /*Create a unique token and sign the URL to make it unique, available only for 300 minutes*/
        do {
            $token = Str::random(20);
        } while (Invite::where('token', $token)->first());
        Invite::create([
            'token' => $token,
            'email' => $request->input('email')
        ]);

        $url = URL::temporarySignedRoute(

            'registration', now()->addMinutes(300), ['token' => $token]
        );

        Notification::route('mail', $request->input('email'))->notify(new InviteNotification($url));

        return redirect('/admin/users')->with('success', 'The Invite has been sent successfully');
    }

    public function show(User $user)
    {
        $phrase=Item::PhraseRand();

        $userItemsWatched = Item::ItemsPerUser($user->id);
        $comments=Comment::where('user_id', $user->id)->orderByDesc('created_at')->take(10)->get();
```

```php
        $items=DB::table('items')->where('user_id', $user->id)->get();

        return view('admin.users.show', compact('user','phrase',
'items', 'userItemsWatched', 'comments'));
    }

    public function destroy(User $user)
    {

        $user->delete();

        return redirect()->back();
    }
}
```

4. MiddleWare

4.1 IsAdmin

Comprueba que el usuario autenticado es administrador

```php
<?php

namespace App\Http\Middleware;

use Closure;
use Illuminate\Support\Facades\Auth;

class IsAdmin
{
    /**
     * Handle an incoming request.
     *
     * @param  \Illuminate\Http\Request  $request
     * @param  \Closure  $next
     * @return mixed
     */
    public function handle($request, Closure $next)
    {
        if (Auth::user() &&  Auth::user()->admin == 1) {
            return $next($request);
        }

        return redirect('/');    }
}
```

5. Models

5.1 Comment

```php
<?php

namespace App;
```

```php
use Illuminate\Database\Eloquent\Model;

class Comment extends Model
{
    protected $fillable = ['body', 'item_id', 'user_id', 'item_title',
'media_type'];

    public function author()
    {
        return $this->belongsTo('App\User');
    }
}
```

5.2 Episode

El método ImageExist comprueba si el capítulo tiene una imagen representativa, y si no la tiene le pone una por defecto.

```php
<?php

namespace App;

use Illuminate\Database\Eloquent\Model;
use Illuminate\Support\Facades\DB;

class Episode extends Model
{
    public static function EpisodeExist($data1, $data2)
    {
        $match=['user_id' => $data1, 'episode_tmdb_id' => $data2];
        $episode= DB::table('episodes')->select('episode_tmdb_id')-
>where($match)->first();

        return $episode;
    }

    public function ImageExist($url)
    {
        $array = @get_headers($url);

        $string = $array[0];

        if(strpos($string, "404")) {
            return false;
        }

        return true;
    }

    public function item()
    {
        return $this->belongsTo(Item::class, 'tmdb_id', 'tmdb_id');
    }

}
```

5.3 Invite

```php
<?php

namespace App;

use Illuminate\Database\Eloquent\Model;

class Invite extends Model
{
    protected $fillable=[
        'email',
        'token'
    ];
}
```

5.4 Item

El método ítem construye el objeto a partir de métodos del modelo TMDB y devuelve el objeto. E ItemEpisode igual.

```php
<?php

namespace App;
use App\TMDB;
use Carbon\Carbon;
use GuzzleHttp\Client;
use Illuminate\Database\Eloquent\Model;
use Illuminate\Support\Arr;
use Illuminate\Support\Collection;
use Illuminate\Support\Facades\DB;
use PhpParser\Node\Expr\Array_;
use Symfony\Component\Finder\Finder;

class Item extends Model
{
    protected $fillable = ['title', 'tmdb_id', 'user_id', 'poster',
'media_type'];

    private $tmdb;
    private $client;

    public function __construct(TMDB $tmdb)
    {

        $this->tmdb = $tmdb;

    }

    public function item($tmdbId, $mediaType)
    {

        $found = $this->tmdb->details($tmdbId, $mediaType);

        if( ! (array) $found) {
            return response('Not found', Response::HTTP_NOT_FOUND);
        }
```

```php
        $item = $this->tmdb->createItem($found, $mediaType);

        return $item;
    }

    public function ItemEpisode($data1, $data2)
    {
        $item= $this->tmdb->tvEpisodes($data1,$data2);
        return $item;
    }

    public static function ItemExist($data1, $data2)
    {
        $match=['user_id' => $data1, 'tmdb_id' => $data2];
        $item= DB::table('items')->where($match)->first();

        return $item;
    }

    public static function ItemWatched($data1, $data2, $data3)
    {
        $match=['user_id' => $data1, 'tmdb_id' => $data2, 'watched' =>
$data3];
        $item= DB::table('items')->where($match)->first();

        return $item;
    }

    public static function ItemWatchlist($data1, $data2, $data3)
    {
        $match=['user_id' => $data1, 'tmdb_id' => $data2, 'watchlist'
=> $data3];
        $item= DB::table('items')->where($match)->first();

        return $item;
    }

    public function user()
    {
        return $this->belongsTo(User::class);
    }

    public function search($title)
    {

        $item= $this->tmdb->search($title);

        return $item;
    }

    public static function PhraseRand()
    {
        $phrases=[
          'Why so serious?', 'I\'m going to make him an offer he
can\'t refuse', 'May the Force be with you',
            'You talking to me?', 'I love the smell of napalm in the
morning', 'Show me the money!', 'You can\'t handle the truth!',
            'I\'ll be back', 'Carpe diem. Seize the day, boys. Make
your lives extraordinary', 'How you doin\'?', 'It\'s gonna be legen —
wait for it — dary.',
```

```php
            'Oh, my God! They killed Kenny!',
        ];
        $phrase=Arr::random($phrases, 1);

        return $phrase;

    }

    public static function ItemsPerUser($id)
    {

        $showswatched= DB::table('items')->where('user_id', $id)-
>where('watched' , 1)->where('media_type', 'tv')->select('id')-
>count('id');
        $showswatchlist= DB::table('items')->where('user_id', $id)-
>where('watchlist' , 1)->where('media_type', 'tv')->select('id')-
>count('id');
        $moviesswatched= DB::table('items')->where('user_id', $id)-
>where('watched' , 1)->where('media_type', 'movie')->select('id')-
>count('id');
        $moviesswatchlist= DB::table('items')->where('user_id', $id)-
>where('watchlist' , 1)->where('media_type', 'movie')->select('id')-
>count('id');

        $itemsPerUser= [

        'showswatched' => $showswatched,
        'showswatchlist' => $showswatchlist,
        'moviesswatched' => $moviesswatched,
        'moviesswatchlist' => $moviesswatchlist

        ];

        return $itemsPerUser;
    }

    public static function TotalItems()
    {

        $showswatched= DB::table('items')->where('watched' , 1)-
>where('media_type', 'tv')->select('id')->count('id');
        $moviesswatched= DB::table('items')->where('watched' , 1)-
>where('media_type', 'movie')->select('id')->count('id');

        $totalitems= [

            'showswatched' => $showswatched,
            'moviesswatched' => $moviesswatched,

        ];

        return $totalitems;
    }

    public function comments()
    {
        return $this->hasMany(Comment::class);
    }

}
```

5.5 Post

```php
<?php

namespace App;

use Illuminate\Database\Eloquent\Model;

class Post extends Model
{
    protected $guarded = [];

    public function author()
    {
        return $this->belongsTo('App\User', 'author_id');
    }
}
```

5.6 TMDB

En el construct hacemos un método singleton para hacer llamadas al api de TMDB. El método trending devuelve las películas y series más populares del momento, las cuales se muestran en la página principal de la web.

El método requestTmdb sirve como plantilla para hacer llamadas a la api y trabajar con sus resultados.

El método createItems junto con el método createItem recibe el json de respuesta de la api y lo me lo devuelve limpio y preparado para trabajar con él.

El método hasLimitRemaining es para controlar el ritmo de llamadas a la api y no sobrepasar su limite.

El método search hace llamadas a la api en el buscador para devolver los resultado, junto con los métodos anteriormente descritos.

```php
<?php

namespace App;

use Carbon\Carbon;
use GuzzleHttp\Client;
use Illuminate\Support\Collection;
use Illuminate\Support\Facades\Cache;
use GuzzleHttp\Exception\ClientException;
use Symfony\Component\HttpFoundation\Response;

class TMDB
{
    private $client;
    private $apiKey;
    private $translation;

    private $base = 'https://api.themoviedb.org';
```

```php
    /**
     * Get the API Key for TMDb and create an instance of Guzzle.
     *
     * @param Client $client
     */
    public function __construct(Client $client)
    {
        $this->apiKey = env('Tmdb_API');
        $this->translation = config('app.TRANSLATION');
        $this->client = $client;
    }

    public function trending()
    {
            $responseMovies = $this->fetchPopular('movie');
            $responseTv = $this->fetchPopular('tv');

7. Notifications

7.1 InviteNotification

```php
<?php

namespace App\Notifications;

use Illuminate\Bus\Queueable;
use Illuminate\Notifications\Notification;
use Illuminate\Contracts\Queue\ShouldQueue;
use Illuminate\Notifications\Messages\MailMessage;

class InviteNotification extends Notification
{
    use Queueable;
    protected $notification_url;

    /**
     * Create a new notification_url instance.
     *
     * @param $notification_url
     */
    public function __construct($notification_url)
    {
        $this->notification_url = $notification_url;
    }

    /**
     * Get the notification's delivery channels.
     *
     * @param  mixed  $notifiable
     * @return array
     */
    public function via($notifiable)
    {
        return ['mail'];
    }

    /**
     * Get the mail representation of the notification.
     *
     * @param  mixed  $notifiable
     * @return \Illuminate\Notifications\Messages\MailMessage
     */
    public function toMail($notifiable)
    {
        return (new MailMessage)
            ->greeting('Hi There!')
            ->line('This is to invite you to join our platform ' .
config('app.name'))
            ->action('Click to start!',$this->notification_url)
            ->line('Thank you for using our application!');
    }

    /**
     * Get the array representation of the notification.
     *
     * @param  mixed  $notifiable
     * @return array
     */
    public function toArray($notifiable)
    {
        return [
```

```
                    //
            ];
        }
    }
```

7.2 ShowtraktStats

Con el paquete que aparece en el *Readme* del proyecto, se nos crea un nuevo canal por el que enviar la notificación hacia telegram. Luego necesitamos crear el método *ToTelegram* y rellenarlo como está mas abajo, indicando el ID del canal al que el bot escribirá. Y el ID del bot de telegram a utilizar, está en el .env

Esta notificación se ejecutará cada vez que se registre un usuario, como hemos visto mas arriba en el RegisterController

```php
<?php

namespace App\Notifications;

use Illuminate\Bus\Queueable;
use Illuminate\Notifications\Notification;
use Illuminate\Contracts\Queue\ShouldQueue;
use Illuminate\Notifications\Messages\MailMessage;
use NotificationChannels\Telegram\TelegramChannel;
use NotificationChannels\Telegram\TelegramFile;
use NotificationChannels\Telegram\TelegramMessage;

class ShowtraktStats extends Notification implements ShouldQueue
{
    use Queueable;

    /**
     * Create a new notification instance.
     *
     * @return void
     */
    public function __construct()
    {
        //
    }

    /**
     * Get the notification's delivery channels.
     *
     * @param  mixed  $notifiable
     * @return array
     */
    public function via($notifiable)
    {
        return [TelegramChannel::class];
    }

    /**
     * Get the mail representation of the notification.
     *
     * @param  mixed  $notifiable
     * @return \Illuminate\Notifications\Messages\MailMessage
```

```php
     */
    public function toTelegram($notifiable)
    {
        return TelegramMessage::create()
            // Optional recipient user id.
            ->to('-1001157340449')
            // Markdown supported.
            ->content("Welcome to our new User:\n\n*Name:* " .
$notifiable->name . "\n*Email:* " . $notifiable->email . "\n*Custom
Title:* " . $notifiable->custom_title);
    }

    /**
     * Get the array representation of the notification.
     *
     * @param  mixed  $notifiable
     * @return array
     */
    public function toArray($notifiable)
    {
        return [
            //
        ];
    }
}
```

7.3 TotalStats

Esta notificacíon funciona igual que la anterior, indicándole a qué canal lo va a enviar el Bot a través de su ID.

Se ha creado un comando especifico *artesan (como se indica en siguientes apartados), para poder ejecutarlo cuando queramos desde consola y, además, se ha añadido al kernel del programa para que se ejecute dos veces al día.*

```php
<?php

namespace App\Notifications;

use Illuminate\Bus\Queueable;
use Illuminate\Notifications\Notification;
use Illuminate\Contracts\Queue\ShouldQueue;
use Illuminate\Notifications\Messages\MailMessage;
use NotificationChannels\Telegram\TelegramChannel;
use NotificationChannels\Telegram\TelegramMessage;

class TotalStats extends Notification
{
    use Queueable;

    /**
     * Create a new notification instance.
     *
     * @return void
     */
    public function __construct()
    {
        //
```

```
        }

        /**
         * Get the notification's delivery channels.
         *
         * @param  mixed  $notifiable
         * @return array
         */
        public function via($notifiable)
        {
            return [TelegramChannel::class];
        }

        /**
         * Get the mail representation of the notification.
         *
         * @param  mixed  $notifiable
         * @return \Illuminate\Notifications\Messages\MailMessage
         */
        public function toTelegram($notifiable)
        {
            //dd($notifiable->stats);
            return TelegramMessage::create()
                // Optional recipient user id.
                ->to('-1001157340449')
                // Markdown supported.
                ->content("*Showtrakt Stats*\n"
                    . "------------------------"
                . "\n*Total of Users:* " . $notifiable-
>stats['totalusers'] .
                "\n*Total TV Shows:* " . $notifiable-
>stats['totalitems']['showswatched'] .
                "\n*Total Movies:* " . $notifiable-
>stats['totalitems']['moviesswatched'] .
                "\n*Total Comments:* " . $notifiable-
>stats['totalcomments'] .
                "\n*Top Movies:* \n" . "    -" .$notifiable-
>stats['topmovies'][0]->title .
                "\n" . "    -" . $notifiable->stats['topmovies'][1]->title
.
                "\n" . "    -" . $notifiable->stats['topmovies'][2]->title
.
                "\n*Top TV Shows:* \n" . "    -" .$notifiable-
>stats['topshows'][0]->title .
                "\n" . "    -" . $notifiable->stats['topshows'][1]->title
.
                "\n" . "    -" . $notifiable->stats['topshows'][2]-
>title);
        }

        /**
         * Get the array representation of the notification.
         *
         * @param  mixed  $notifiable
         * @return array
         */
        public function toArray($notifiable)
        {
            return [
                //
            ];
```

```
        }
}
```

8. Commands

8.1 TotalStats

Se ha creado un comando, que se puede utilizar con *php artisan showtrakt:stats, el comando saca las estadísticas que queremos que envié a telegram y se las pasa a la notificación TotalStats (que se ha desarrollado arriba). Para que se ejecute dos veces al dia se ha añadido este comando al kernel (siguiente apartado).*

```php
<?php

namespace App\Console\Commands;

use App\Comment;
use App\Item;
use App\User;
use Illuminate\Console\Command;
use Illuminate\Support\Facades\Auth;
use Illuminate\Support\Facades\DB;
use Illuminate\Support\Facades\Notification;

class TotalStats extends Command
{
    /**
     * The name and signature of the console command.
     *
     * @var string
     */
    protected $signature = 'showtrakt:stats';

    /**
     * The console command description.
     *
     * @var string
     */
    protected $description = 'Send stats of all activity to Telegram
Channel, twice a day';

    /**
     * Create a new command instance.
     *
     * @return void
     */
    public function __construct()
    {
        parent::__construct();
    }

    /**
     * Execute the console command.
     *
     * @return mixed
     */
    public function handle()
```

```php
    {
        $user= new User();
        $totalusers=User::count();
        $totalitems = Item::TotalItems();
        $totalcomments=Comment::count();

        $topmovies= DB::select("SELECT title FROM items WHERE
media_type='movie' GROUP BY title ORDER BY count(*) DESC LIMIT 3");
        $toptvshows= DB::select("SELECT title FROM items WHERE
media_type='tv' GROUP BY title ORDER BY count(*) DESC LIMIT 3");

        $stats= [
            'totalusers' => $totalusers,
            'totalitems' => $totalitems,
            'totalcomments' => $totalcomments,
            'topmovies' => $topmovies,
            'topshows' => $toptvshows,
        ];
        $user->stats = $stats;

        $user->notify(new \App\Notifications\TotalStats($stats));

    }
}
```

9. Kernel

Como se puede ver, en el método *Schedule* se llama al comando de *artisan* dos veces al día (twiceDaily).

Y para que esto tenga efecto, en el crontab de nuestro servidor, donde está desplegada la web, hay que meter la siguiente línea de código:

```
* * * * * cd /path-to-your-project && php artisan schedule:run >>
/dev/null 2>&1
```

```php
<?php

namespace App\Console;

use Illuminate\Console\Scheduling\Schedule;
use Illuminate\Foundation\Console\Kernel as ConsoleKernel;

class Kernel extends ConsoleKernel
{
    /**
     * The Artisan commands provided by your application.
     *
     * @var array
     */
    protected $commands = [
        'App\Console\Commands\TotalStats',
    ];
```

```php
    /**
     * Define the application's command schedule.
     *
     * @param  \Illuminate\Console\Scheduling\Schedule  $schedule
     * @return void
     */
    protected function schedule(Schedule $schedule)
    {
        $schedule->command('showtrakt:stats')->twiceDaily(14,22);
    }

    /**
     * Register the commands for the application.
     *
     * @return void
     */
    protected function commands()
    {
        $this->load(__DIR__.'/Commands');

        require base_path('routes/console.php');
    }
}
```

10.   Requests

10.1 PostFormRequest

```php
<?php

namespace App\Http\Requests;

use Illuminate\Foundation\Http\FormRequest;

class PostFormRequest extends FormRequest
{

    /**
     * Get the validation rules that apply to the request.
     *
     * @return array
     */
    public function rules()
    {
        return [
            'title' => 'required|unique:posts|max:255',
            'title' => array('Regex:/^[A-Za-z0-9 ]+$/'),
            'body' => 'required',
            'image_url' => 'required'
        ];
    }
}
```
